What are Digital Assistants (DA) in ERP Solution?

According to the available information online, DA is an advanced computer program with integrated artificial intelligence (AI) and machine learning (ML) capabilities that simulates the conversation with the user who use the features, typically designed to assist the company by answering questions and performing basic tasks for their customers. Without any human training needed, the AI and machine learning will learn and adapt to them individually and easily.

Now with breakthroughs in AI technology, these virtual assistants are becoming increasingly useful to implement into enterprise software settings. Due to the outbreak of the Covid-19, work-from-home mandates are becoming the new norm for most of the organizations. The organizations across industries to radically rethink how the way of operate their business and possibility to embrace technological investment, hence now is the time for them to fill up the new requirement during this pandemic time. Many of the companies started deployed these virtual assistants to help them to remote employees or publics with general inquires, policy questions, health and safety concerns, and self-service requests.
