The objective of attending this training is to gain exposure to the adoption of industry 4.0 among the local industries. The participants are introduced to the Raspberry Pi and Arduino hardware. The participants gained the opportunity to learn IoT and advanced technical knowledge and skill-set on how to carry out IoT projects that can be applied to the organisation.

MyReskill IoT Training is a four days virtual workshop and plus one week developing a Proof-of-Concept (POC) project. YGL is conducting MyReskill IoT Training in March. Seats are limited to 20 companies. Register now!

YGL NERVO can expertly deploy, monitor and troubleshoot your system that centralizes operations at your enterprise towards Industry 4.0.

A platform helps to organize those functions to happen simultaneously and harmoniously so that no time, energy and financial resources are lost.

The manufacturing, supply chain, financials, human resources and customer relations management each represent a different organ of the body or one module within the YGL NERVO system. These modules help an organization run its business more effectively and efficiently through digitizing all information and data that used to have to be manually entered individually into each database.

YGL NERVO can expertly deploy, monitor and troubleshoot your system that centralizes operations at your enterprise towards Industry 4.0.
