Happy Chinese new year. May good luck and success always follow you wherever you go. Wishing you in the year of Tiger!

From the Management

ARE YOUR COMPANY EARN MONEY?

CONNECTING PEOPLE, PROCESS & TECHNOLOGY IN YOUR ORGANISATION

Would you want the world most affordable and value for money solution which connecting all Stake Holders in the organisation?

YGL NERVO is a "nervous system" for your business.

A platform helps to organize those functions to happen simultaneously and harmoniously so that no time, energy and financial resources are lost.

The manufacturing, supply chain, financials, human resources and customer relations management each represent a different organ of the body or one module within the YGL NERVO system. These modules help an organization run its business more effectively and efficiently through digitizing all information and data that used to have to be manually entered individually into each database.

YGL NERVO can expertly deploy, monitor and troubleshoot your system that centralizes operations at your enterprise towards Industry 4.0.

Smart warehouse is automated for improved productivity, efficiency, and accuracy, and the solutions that are implemented give flexibility and capability to the employees and their processes.

Take a look at the technologies you should be using in your smart warehouse, with discussion on how to keep them flexible, functional, and effective.

In no specific order, these are the five technologies you need access to in your warehouse today:

A Warehouse Management System

A WMS should comprehensively consolidate all of your critical warehouse data into one easily accessible platform, to give select members of your supply chain a full view of your workings, lightning-fast reporting, real-time statistics, and accurate planning capabilities.

The use of your warehouse management system should perfectly complement your other autonomous processes, and provide the following benefits:

- Real-time access to quality data giving you increased visibility throughout your supply chain
- Accurate demand forecasting
- Reduced labour costs due to efficient labour allocation
- Streamlined warehouse processes
- Optimised warehouse layout
- Improved inventory accuracy
- Improved pick accuracy
- Decreased time between picks
- Improved warehouse flexibility and responsiveness
- Improved warehouse safety and security
- Improved supplier relationships
- Improved customer service levels
- The ability to implement an ongoing optimisation strategy
