

On the recent courtesy visit to YGL, we were honored to welcome Aziz Kevin Lee, Head of Northern Region, State Digital Economy Office (SDEO) Corporate Affairs from Malaysia Digital Economy Corporation.

The visit served as a valuable platform to strengthen ties between YGL and MDEC, with discussions centered around Malaysia's digital transformation agenda, innovation-driven growth, and opportunities for strategic collaboration in the Northern Region.

During the session, both parties exchanged insights on accelerating digital adoption among businesses, particularly in the areas of Enterprise Resource Planning (ERP), ESG digital solutions, AI-driven business transformation, e-Invoicing, and smart industry technologies. YGL shared its ongoing initiatives in supporting Malaysian enterprises through advanced digital solutions that enhance operational efficiency, compliance, and sustainability.

Aziz Kevin Lee also highlighted MDEC's ongoing efforts in empowering businesses through digital economy programs, government incentives, and ecosystem support designed to help companies embrace Industry 4.0 and strengthen competitiveness in both local and global markets.

The courtesy visit further opened opportunities for future collaboration between YGL and MDEC, particularly in fostering SME digitalisation, promoting ESG readiness, and supporting the development of Malaysia's technology-driven economy.

YGL appreciates the visit and looks forward to building a stronger partnership with Malaysia Digital Economy Corporation in driving sustainable innovation and digital excellence across industries.

## Strengthening Workplace Safety Through Fire Prevention Awareness

YGL Convergence Berhad was honoured to host the **Program 1RAPI & Kempen Pencegahan Kebakaran Moden**, organised by Pertubuhan Pencegah Kebakaran Kuala Lumpur, at our Penang office. As part of YGL's ongoing commitment to workplace safety and employee well-being, the programme aimed to enhance fire prevention awareness and equip our team with practical knowledge on emergency preparedness and response.

The session featured informative presentations, hands-on demonstrations, and practical training exercises, providing participants with valuable insights into modern fire prevention techniques, hazard identification, and effective emergency response procedures. These initiatives help ensure that our employees are better prepared to respond confidently and responsibly in the event of a fire-related emergency.

At YGL, we firmly believe that a safe workplace is the foundation of a sustainable and resilient organisation. This programme supports our Environmental, Social and Governance (ESG) commitments by promoting employee health and safety, strengthening risk management practices, and fostering a culture of responsibility and preparedness across the organisation.

We extend our sincere appreciation to Pertubuhan Pencegah Kebakaran Kuala Lumpur for conducting this impactful and educational programme. Their expertise and dedication have contributed significantly to enhancing our workplace safety awareness and reinforcing our commitment to creating a safer working environment for all.

## Achieving True Inventory Visibility at the Bin Level

Most warehouse systems provide visibility at the zone or aisle level — but operational accuracy requires far greater precision. At YGL, we go deeper.

### **Bin-Level Accuracy, Not Just Location Tracking**

Inventory discrepancies remain a significant hidden cost for manufacturers in Malaysia, contributing to an estimated **6–12% increase in annual carrying costs**. These losses often go unnoticed in traditional reporting structures.

YGL Smart Warehouse eliminates this blind spot by delivering **true bin-level inventory visibility**, ensuring every item is traceable to its exact physical location.

### **Real-Time Traceability Powered by Smart Technology**

Through the integration of **RFID and barcode technologies**, YGL Smart Warehouse captures every movement of stock with precision and accountability. Each transaction is:

- Time-stamped
- User-attributed
- System-logged

This enables organisations to understand not only what is missing, but also **when it moved and who handled it**.

### **Comprehensive Traceability Features**

- ✓ Bin-level stock visibility across multiple warehouses
- ✓ Full end-to-end audit trail per SKU — from receiving to dispatch
- ✓ Expiry tracking supported by auto FEFO (First Expired, First Out) logic
- ✓ Seamless integration with leading ERP systems including SAP, Oracle, and Microsoft Dynamics
